

# Year 2-3-4 Science Class

Students in Year 2-3-4 are learning about the life cycle of plants and animals in science. Mrs Hartmann brought in some seeds for the students to plant and observe their growth.

All students had their own cup. The students were given rubber gloves which they put on before placing soil into their cups. Then they spread seeds on top of the soil and added more soil to cover them.

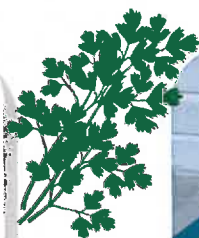

Spray bottles were used to water the plants. The plants were placed on the window sill so they could get some sunshine. We had some very rainy and cloudy days so the seeds did not germinate quickly. The ones that did grow were measured, documented and diagrams of the plants were drawn. Some plants were given too much water, so they did not grow at all!!

The basil that Makayla and Dakota grew was successful. The soil in their pot had fertilizer. Each day they seem to be growing more. We learnt a lot about plants needing nutrients and the correct position for them to grow.

Basil seedlings just popping out of the soil.

Makayla and Dakota are very proud that their plants grew.

# Alphabet Block Building

Students in Prep-1 are learning how to write the letters of the alphabet correctly. Ms Sullivan decided that they should use building blocks to build the letters. They were given a chosen letter first, then they had to decide which blocks to use. Students decided to use straight, curved, a window and round ones. The results were amazing. A lot of thought and discussion could be heard between the students to get them just right. It was a great learning experience.

Prep-1-2 have made their own sentence with every word starting with the letter M. We found out that there was only 1 uppercase letter M and 10 lowercase letter m's in our sentence.

We made the marshmallow muffins last Friday. They really were marvellous muffins.

My magical magnificent  
mum makes marvellous  
melting marshmallow  
muffins.
